

# React Native Digital Counter & Theme Toggle App

Single-screen React Native application implementing a digital counter with increment, decrement, reset functionality and dynamic Light/Dark theme switching.

## App.js

```
import React, { useState } from 'react';
import {
  View,
  Text,
  TouchableOpacity,
  StyleSheet,
} from 'react-native';

const App = () => {
  const [count, setCount] = useState(0);
  const [isDarkMode, setIsDarkMode] = useState(false);

  const handleIncrement = () => {
    setCount(count + 1);
  };

  const handleDecrement = () => {
    if (count > 0) {
      setCount(count - 1);
    }
  };

  const handleReset = () => {
    setCount(0);
  };

  const toggleTheme = () => {
    setIsDarkMode(!isDarkMode);
  };

  const backgroundColor = isDarkMode ? '#222' : '#FFFFFF';
  const textColor = isDarkMode ? '#FFFFFF' : '#000000';

  return (
    <View
      style={[
        styles.container,
        { backgroundColor: backgroundColor },
      ]}
    >
      <Text
        style={[
          styles.counterText,
          { color: textColor },
        ]}
      >
        {count}
      </Text>
    </View>
  );
};
```

```

<View style={styles.buttonRow}>
  <TouchableOpacity
    style={styles.button}
    onPress={handleIncrement}
  >
    <Text style={styles.buttonText}>
      Increment
    </Text>
  </TouchableOpacity>

  <TouchableOpacity
    style={styles.button}
    onPress={handleDecrement}
  >
    <Text style={styles.buttonText}>
      Decrement
    </Text>
  </TouchableOpacity>
</View>

<TouchableOpacity
  style={styles.button}
  onPress={handleReset}
>
  <Text style={styles.buttonText}>
    Reset
  </Text>
</TouchableOpacity>

<TouchableOpacity
  style={styles.button}
  onPress={toggleTheme}
>
  <Text style={styles.buttonText}>
    Toggle Theme
  </Text>
</TouchableOpacity>
</View>
);
};

```

```

const styles = StyleSheet.create({
  container: {
    flex: 1,
    justifyContent: 'center',
    alignItems: 'center',
    padding: 20,
  },
  counterText: {
    fontSize: 48,
    fontWeight: 'bold',
    marginBottom: 30,
  },
  buttonRow: {
    flexDirection: 'row',
    marginBottom: 15,
  },

```

```
button: {
  backgroundColor: '#3498db',
  paddingVertical: 12,
  paddingHorizontal: 20,
  margin: 5,
  borderRadius: 8,
},
buttonText: {
  color: 'FFFFFF',
  fontSize: 16,
  fontWeight: 'bold',
},
});
```

```
export default App;
```

# Implementation Notes

Features Implemented: 1. Counter starts at 0. 2. Increment button increases count by 1. 3. Decrement button decreases count by 1 only when count > 0. 4. Reset button sets counter back to 0. 5. Theme Toggle switches between: - Light Mode: White background, dark text. - Dark Mode: Dark background, white text. 6. Flexbox is used to center the UI and arrange buttons. 7. `useState` manages both counter state and theme state. Running the App: Android Device: 1. Enable Developer Mode and USB Debugging. 2. Connect the Android device. 3. Run: `npx react-native run-android` Android Emulator (Android Studio): 1. Start an Android Virtual Device (AVD). 2. Run: `npx react-native run-android` Requirements: - Node.js - React Native CLI - Android Studio SDK and Emulator (if not using a real device)
